RISE UP TECHNOLOGIES

Security that connects.
Power that performs.

Manufacturing, integration and technology partnerships for complete site solutions.

SECURITY + NETWORKING

SOLAR + ENERGY STORAGE + POWER

Security platforms built around your site

We manufacture mobile trailers and pole-mounted systems, then configure the technology for your operation.

ODS 5500

Flexible mobile solar surveillance for changing sites.

ODS 8500

Higher-capacity mobile systems for demanding loads.

ISS / ISSS

Grid-powered or solar-powered pole security.

Complete security, from detection to response

Rise Up brings the hardware, software and monitoring workflow together under one coordinated solution.

Cameras + sensors

CCTV, PTZ, panoramic, thermal, LiDAR, radar and specialist sensing.

Access + VMS

Doors, gates, credentials and compatible VMS/NVR platforms for connected incident review.

Monitoring + deterrence

Partner-delivered remote monitoring, video verification, talk-down and agreed escalation.

Broad relationships. Application-led technology choices.

We work with leading camera, sensor and VMS manufacturers and specialist monitoring providers to select the right combination for each site.

The network behind every reliable system

A camera view, an access event and a remote operator are only as effective as the infrastructure connecting them.

Buildings + campuses

Structured copper and fiber, managed switches, PoE, racks and indoor/outdoor Wi-Fi.

Remote + temporary sites

Wireless bridges, cellular links and satellite options matched to coverage and bandwidth.

Resilience + secure access

UPS, surge protection, VLANs, VPN access and device-health diagnostics.

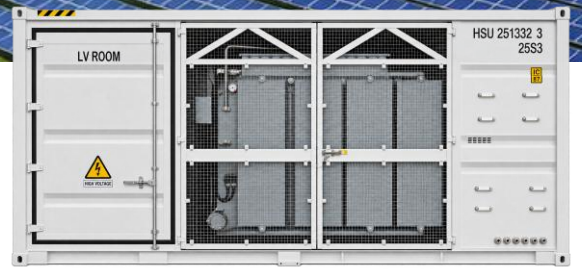
Installation + handoff

Cabling, configuration, testing, documentation and operator training.

RISEUP TECHNOLOGIES

Solar power at the scale your project needs

Small off-grid systems, commercial installations, microgrids and utility-scale solar through a coordinated delivery approach.



Remote power

Solar and batteries for security, communications, sensors and oilfields.

Mobile + microgrid

Trailer and skid systems with storage, controls and generator options.

Commercial + utility

Grid-tied and hybrid solutions with engineering and interconnection support.

One coordinated plan for generation, storage and the loads that matter.

Energy storage matched to the duty

Battery storage and flywheel systems address different operating needs. We help define the right architecture.

Battery energy storage

BESS for backup, renewable integration, peak management and load shifting. Coordinate PCS, BMS and EMS.

Flywheel energy storage

Fast-response power for short-duration ride-through, repetitive cycling and transient-load support.

Power conversion and delivery

A broader equipment portfolio helps connect generation and storage to the power your facility requires.

Solid-state transformers + PCS

Advanced AC/DC conversion and bidirectional storage interfaces for suitable system architectures.

Transformers + substations

LV, MV and HV solutions, including dry-type, pad-mounted and packaged substations.

Generators + hybrid power

Generator options integrated with solar, storage and controls for critical and remote loads.

Ratings, certifications and utility requirements confirmed for each project.

EV charging, supplied and fully installed

From everyday destination charging to high-power hubs, we deliver a complete site solution.

Compact AC charging

Wall-mounted unit
40 A at 240 V

For apartments, workplaces and parking structures.

High-power DC charging

Flagship charging range
150–350 kW

For fleet hubs, highway stops and high-traffic destinations.

Complete installation. One coordinated delivery.

Site and power assessment, electrical and civil installation, networking, commissioning and charging-management setup with specialist partners.

One team to shape your next project

Rise Up coordinates the platform, system integration and specialist partners around your operating needs.

We stay current so your systems can keep evolving.

Our relationships across security, networking and power give you access to emerging technology, with compatibility and site requirements driving the final design.

Let’s turn your site requirements into a complete proposal.

Send your site plan, security priorities, power requirements and target timeline.
